<b>Student name</b>	<b>DEEPA REKHA S</b>
<b>Student roll no.</b>	<b>194334</b>
<b>Maximum marks</b>	<b>2 marks</b>

## ASSIGNMENT 2

1) Write a flask program which should display Name , Email, phone and it should display the same details once we hit submit.

```
<form method = "Post">
    <table>
        <tr>
            <td> Name </td>
            <td> <input type = "text" Name = "uName" required minlength="4"/></td>
        </tr>
        <tr>
            <td> Phone </td>
            <td> <input type = "number" Name = "uPhone" required minlength="100000"/></td>
        </tr>
        <tr>
            <td> E-mail </td>
            <td> <input type = "email" Name = "uEmail" required/></td>
        </tr>
        <tr>
            <td> <button type = "submit" > Submit </button></td>
        </tr>
    </table>
</form>
```

```
from flask import Flask, render_template, request
```

```
#create a server instance
```

```
app=Flask(__Name__)
```

```
@app.route("/", methods=["GET", "POST"])
```

```
def index():
```

```
    errors = {}
```

```
    if request.method=="POST":
```

```
        uName=request.form["uName"]
```

```
        print("User=",uName)
```

```
        print("Phone=",request.form["uPhone"])
```

```
        print("Email=",request.form["uEmail"])
```

```
        if not uName[0].isalpha():
```

```
            errors["uName"]=["Username should start with alphabet"]
```

```
        return render_template("home.html",errors=errors)
```

```
app.run(host="0.0.0.0",port=50100,debug=True)
```

2) Write a flask program which should cover cookies, sessions

```
{% extends "layout.html" %}
```

```
{% block y %}
```

```
{% if session.name %}
```

```
    You are Register {{ session.name }} <a href="/logout">logout</a>.
```

```
{% else %}
```

```
    You are not Register. <a href="/login">login</a>.
```

```
{% endif %}
```

```
{% endblock %}
```

---

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
    <head>
```

```
        <meta name="viewport" content="initial-scale=1, width=device-width">
```

```
        <title> flask </title>
```

```
    </head>
```

```
    <body>
```

```
        {% block y %}{% endblock %}
```

```
    </body>
```

```
</html>
```

---

---

```
{% extends "layout.html" %}
```

```
{% block y %}
```

```
<h1> REGISTER </h1>
```

```
<form action="/login" method="POST">
```

```
<input placeholder="Name" autocomplete="off" type="text" name="name">
```

```
<input type="submit" name="Register">
```

```
</form>
```

```
{% endblock %}
```

```
from flask import Flask,  
render_template, redirect,  
request, session
```

```
# The Session instance is not used for direct  
access, you should always use flask.session
```

```
from flask_session import Session
```

```
app = Flask(__name_)
```

```
app.config["SESSION_PERMANENT"] = False
```

```
app.config["SESSION_TYPE"] = "filesystem"
```

```
Session(app)
```

```
@app.route("/")
```

```
def index():
```

```
    if not session.get("name"):
```

```
        return redirect("/login")
```

```
    return render_template('index.html')
```

```
@app.route("/login", methods=["POST", "GET"])
```

```
def login():
```

```
    if request.method == "POST":
```

```
        session["name"] =  
request.form.get("name")
```

```
    return redirect("/")
```

```
    return render_template("login.html")
```

```
@app.route("/logout")
```

```
def logout():
```

```
    session["name"] = None
```

```
    return redirect("/")
```

```
if __name__ == "__main__":
```

```
    app.run(debug=True)
```

```

3)      Write a flask program which should display resume details
and also have upload resume option
from flask import Flask, render_template, request, url_for,
redirect
from email.mime.text import MIMEText
import smtplib
from email.message import EmailMessage
app = Flask(__name_)

@app.route("/")
def index():
    return render_template("index.html")

@app.route("/sendemail/", methods=['POST'])
def sendemail():
    if request.method == "POST":
        name = request.form['name']
        subject = request.form['Subject']
        email = request.form['_replyto']
        message = request.form['message']

        # Set your credentials
        yourEmail = "suraj@geeksforgeeks.org"
        yourPassword = "#####"
```

# Logging in to our email account

```

server = smtplib.SMTP('smtp.gmail.com', 587)
server.ehlo()
server.starttls()
server.login(yourEmail, yourPassword)
```

# Sender's and Receiver's email address

```

msg = EmailMessage()
msg.set_content("First Name : "+str(name)
                +"\nEmail : "+str(email)
                +"\nSubject : "+str(subject)
                +"\nMessage : "+str(message))
msg['To'] = email
msg['From'] = yourEmail
msg['Subject'] = subject
```

# Send the message via our own SMTP server.

```

try:
    # sending an email
    server.send_message(msg)
    print("Send")
except:
    print("Fail to Send")
    pass
return redirect('/')

if __name__ == "__main__":
    app.run(debug=True)
```

```
